EDUCATION

Trent University 2023 – Jan 2027 (expected)
Honours Bachelor of Science, Computer Science | GPA: 83.2%

- Dean's Honour Roll (2024)
- Relevant coursework: Databases, Data Structures & Algorithms, Statistics, Linear Algebra

TECHNICAL SKILLS

Languages: Python, SQL, C
Data & Analytics: pandas, NumPy, scikit-learn, SciPy, Matplotlib, Power BI, Power Query, DAX, Excel
Databases & Tools: SQLite, Git/GitHub, Jupyter, Linux, GCC, GDB
Methods: Data cleaning, exploratory analysis, A/B testing, cohort analysis, predictive modelling, dashboarding

EXPERIENCE

Breaking Games 2024
E-Commerce Data Analysis & Strategy Extern (Remote)

- Cleaned and validated e-commerce sales datasets in Excel and Python (pandas) to make them reporting ready and cut manual errors.
- Analyzed sales and operational metrics to surface pricing gaps, demand trends, and growth opportunities for the product team.
- Built structured summary reports and kept organized records that stakeholders used in pricing and product decisions.

Trent University 2023 – Present
Data Analyst / Software Developer (Academic Projects)

- Built interactive dashboards and reports in Power BI, Power Query, and DAX to track performance and engagement metrics.
- Ran data cleaning, quality checks, and exploratory analysis on academic datasets using Python and Excel.
- Created visualizations with Matplotlib to communicate trends and comparisons clearly.
- Wrote, tested, and debugged C programs in a Linux environment using GCC and GDB.

DATA ANALYTICS PROJECTS

Customer Churn Analysis & Prediction Python, scikit-learn

- Analyzed **7,500** customers and found month-to-month contracts churn at **51.8%** versus **7.9%** on two-year contracts.
- Built a logistic-regression model with **0.798 ROC-AUC** that recalls **75%** of churners, producing a ranked target list for retention.

A/B Test Analysis, Checkout Redesign Python, SciPy

- Analyzed a **16,000**-user experiment and measured a **+10.3%** conversion lift (z-test **p = 0.023**, 95% CI excluding zero).
- Confirmed revenue per user rose from **\$6.32 to \$7.38** and ran a power/MDE check to support a data-backed ship decision.

Cohort Retention & Lifetime Value Analysis Python, pandas

- Built retention matrices across **9,245** customers and **18** signup cohorts; month-1 retention **77.5%**, month-3 **53.0%**.
- Estimated average **LTV near \$123** and identified months 0–3 as the highest-leverage window for retention.

SQL Analytics Portfolio SQL (SQLite)

- Wrote **7** analytical queries on a **70,000+**-row retail database using joins, window functions, CTEs, and cohort logic.
- Surfaced that Electronics drives **45.4%** of revenue, plus segment- and channel-level insights for prioritisation.

Academic Performance & Engagement Dashboard Power BI, DAX

- Transformed raw academic records into a structured reporting model and built interactive dashboards tracking performance and engagement.

ADDITIONAL EXPERIENCE

Camp Counsellor | Walkhome Volunteer | Habitat for Humanity Volunteer
